

3.1.4	Generation of regular magnetic field.....	179
3.2	Basic equations.....	182
3.2.1	(3+1)-split for electromagnetic field.....	182
3.2.2	"No hair" theorem.....	183
3.2.3	Vacuum approximation.....	187
3.2.4	Force-free Grad-Shafranov equation in the Kerr metric....	191
3.2.5	Generation of particle.....	196
3.3	Energy loss mechanism.....	198
3.3.1	Blandford-Znajek process.....	198
3.3.2	Physical interlude - thermodynamics of black holes.....	203
3.4	Structure of the black hole magnetosphere.....	206
3.4.1	General properties.....	206
3.4.2	Exact solutions.....	207
3.4.3	Models of the magnetosphere.....	214
3.5	Conclusion.....	219

Chapter 4

	Full magnetohydrodynamical version - particle acceleration and magnetic collimation.....	221
4.1	Astrophysical introduction - collimation and acceleration.....	221
4.1.1	Radio pulsars.....	221
4.1.2	Active galactic nuclei.....	224
4.1.3	Young stellar objects.....	228
4.1.4	Microquasars, cosmological gamma-bursts, etc.....	229
4.2	Basic equations.....	231
4.2.1	Physical interlude - magnetohydrodynamical waves.....	231
4.2.2	General relativistic flow.....	236
4.2.3	Nonrelativistic flow.....	246
4.2.4	Flow with anisotropic pressure.....	249
4.3	General properties.....	253
4.3.1	Some helpful relations.....	253
4.3.2	Alfvénic surface.....	256
4.3.3	Fast magnetosonic surface - relativistic case.....	258
4.3.4	Fast magnetosonic surface - nonrelativistic case.....	266
4.3.5	Properties of the flow at large distances.....	270
4.3.6	Properties of the flow near the horizon.....	277
4.3.7	Analyzing the algebraic relations.....	282

4.4 Exact solutions.....	286
4.4.1 Cylindrical jets - force-free approximation.....	286
4.4.2 Cylindrical jets - relativistic case.....	291
4.4.3 Cylindrical jets - nonrelativistic case.....	306
4.4.4 Radial outflow.....	312
4.4.5 Black hole magnetosphere.....	329
4.5 Another methods.....	341
4.5.1 Self-similar solutions.....	341
4.5.2 Results of the numerical simulation.....	348
4.6 Conclusion.....	355
Conclusion.....	357
